Migrate to qTest – The Real-Time Test Management Solution for Jira

Customers always tell the same story of chaos, complexity and frustration when it comes to using Jira and HP Quality Center together. Sadly the HP Quality Center just doesn't work.

Common Complaints About HP Quality Center

- **Constant Delays**: HP Quality Center’s daily syncs don't provide the most up-to-date info, which often lead to delays in issue resolution.

- **Costly Overhead**: Syncing data requires significant resources to maintain permissions, types, fields, values and mappings.

- **Poor Performance**: API syncs are time-consuming with HP Quality Center, which can slow down or even crash Jira.
